

M. ZOHAIB SAFDAR

Full-Stack Developer (MERN) | AI & RAG Integration | React.js | Node.js | Python

(+92) 302-2375072 | za789688@gmail.com | github.com/x370 | linkedin.com/in/zohaib-developer | Lahore, Pakistan

SUMMARY

Full-Stack Developer with 3+ years of experience building end-to-end web applications using React.js, Next.js, Node.js, and NestJS, with hands-on experience integrating AI capabilities including Retrieval-Augmented Generation (RAG) chatbots, LLM fine-tuning, and local model deployment (Ollama, GPT4All). Skilled in REST API design, third-party integrations (OAuth, Google Classroom, calendar sync), database design (MongoDB, MySQL), and low-code platforms (Zoho Creator). Experienced across JavaScript, TypeScript, Python, Java, and Go, with a track record of delivering production-grade features from requirements through deployment on AWS and Docker.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS, Ant Design, Material UI, Tailwind CSS, Responsive Design

Backend & APIs: Node.js, Express.js, NestJS, RESTful API Design, Microservices, Third-Party API Integration

AI / Machine Learning: RAG (Retrieval-Augmented Generation), LLM Fine-Tuning (LoRA/QLoRA), Vector Databases & Embeddings, Ollama, GPT4All, Google Colab & Hugging Face, Local Model Deployment (GGUF), Prompt Engineering, Agentic AI, Exploratory Data Analysis (EDA)

Programming Languages: JavaScript, TypeScript, Python, Java, Go

Databases: MongoDB, MongoDB Atlas, MySQL, Mongoose, ORM, Vector DB, Schema Design & Optimization

Low-Code / CRM: Zoho Creator, Multi-Tenant CRM Development, Role-Based Access Control (RBAC)

Auth & Integrations: OAuth 2.0 (Google/Microsoft), JWT, Google Classroom API, Calendar Sync, OWASP Guidelines

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD (GitHub Actions), Linux, Git/GitHub

Tools & Methodologies: Postman, Swagger (OpenAPI), Jira, Agile/Scrum, TDD, Unit & Integration Testing

WORK EXPERIENCE

MERN Stack Developer (AI-Driven Products) — Arham Soft

May 2026 – Present

- Building and maintaining Growth Botz AI, an AI-driven automation product that unifies multiple platforms and third-party integrations into a single workspace.
- Developed a RAG-based AI chatbot for the TeacherAI platform that extracts data from uploaded files, converts it into vector embeddings, and stores it in MongoDB Atlas to power context-aware, document-grounded responses.
- Integrated Google Classroom sync into the TeacherAI platform for automated roster and coursework import.
- Contributed to PlusCareMD, an AI-powered healthcare platform enabling online patient checkups and appointment booking.
- Designed and built a multi-tenant CRM application (hospital & pantry management use cases) using Zoho Creator, implementing role-based access control for CEO-level and staff-level users.
- Fine-tuned pre-trained language models on custom datasets and deployed them locally using Ollama and GPT4All for private, offline inference.
- Performed exploratory data analysis (EDA) and dataset preparation prior to model fine-tuning, using Google Colab and Hugging Face GPU resources for training and evaluation.
- Applied prompt engineering and agentic AI techniques to improve chatbot accuracy, response relevance, and task-automation reliability across AI products.

Full-Stack Developer — Otek Pvt. Ltd.

April 2025 – May 2026

- Built UI features and full-stack modules for CalendarSk and Done Table using Next.js/React.js on the frontend and NestJS on the backend, implementing JWT-based authentication, Material UI, and Tailwind CSS with custom reusable components.

- Designed and consumed RESTful APIs between the NestJS backend and Next.js frontend, handling authentication flows, calendar sync logic, and real-time reservation availability.
- Developed backend services (Go) for a government-level Licensing Management System enabling citizens to submit license applications and track application progress in real time.
- Migrated raw SQL database logic to ORM across the licensing project within one week, improving query performance and making the system more scalable.
- Contributed to a national population management system, integrating hardware biometric fingerprint scanners for citizen registration and building a companion mobile app in Java using PWA technology.
- Gained hands-on backend experience on large-scale government projects, working across Go, ORM design, and API development in a production environment.

React Frontend Developer — Maima Soft

March 2024 – April 2025

- Engineered the frontend of Fuelbook, a fuel management application, using React.js, react-pdf for automated report generation, Ant Design, and SASS.
- Integrated a Redis caching layer with the REST API backend for Fuelbook, improving real-time dashboard response times by 30%.
- Designed MongoDB schemas for high-frequency real-time data updates and trained 10+ end users on the platform, reducing support requests by 35%.
- Built frontend features for an E-commerce platform and an Investment platform using React.js.
- Developed the frontend for EduBirds, a student visa consultancy web application that allowed consultants and students to track application progress in real time.

Front-End Developer Intern — Systems Limited

December 2023 – March 2024

- Learned and applied HTML5, CSS3, JavaScript, and React.js fundamentals through hands-on training.
- Built a fully responsive e-commerce web application as a capstone project, improving front-end performance by 20%.

NOTABLE PROJECTS

- **Growth Botz AI** — AI-driven automation platform unifying multiple tools and platform integrations into one workspace.
- **TeacherAI** — RAG-based AI chatbot with Google Classroom integration and MongoDB Atlas vector storage for document-grounded Q&A.
- **PlusCareMD** — AI-powered healthcare platform for online patient checkups and appointment scheduling.
- **CalendarSk** — Full-stack appointment scheduling platform (NestJS, Next.js, MongoDB, TypeScript) with Google/Microsoft OAuth 2.0 calendar sync, JWT refresh flows, and RBAC.
- **Done Table** — Real-time restaurant reservation system (Next.js, TypeScript, Material UI) with live availability tracking, deployed via Docker CI/CD on AWS.
- **Government Licensing Management System** — Citizen-facing license application and tracking system with a Go backend, migrated from raw SQL to ORM for improved scalability.
- **WRB Country Population Management System** — National citizen registration platform integrating hardware biometric fingerprint scanners for identity capture, with a companion Java mobile app built using PWA technology for field-level registration.
- **Fuelbook** — Fuel management system built with React.js, featuring automated PDF report generation (react-pdf), a Redis caching layer for the REST API backend that improved real-time dashboard response times by 30%, and MongoDB schemas designed for high-frequency real-time data updates.
- **EduBirds** — Student visa consultancy web application enabling consultants to manage and visualize each student's application progress in real time.

EDUCATION

Bachelor of Science in Information Technology

Lahore Garrison University, Lahore | 2018 – 2023
